

IMPORTANT NOTE ON MAPLE SEED GERMINATION

Maple seeds can take a while to germinate, so to improve the germination rate and speed we recommend you 'stratify' your seeds before planting:

- Open the sachet and place the seeds in a bowl
- Pour warm water over the seeds
- Leave the seeds to soak for 24-48 hours
- Pour the water out and transfer the moist seeds into a ziplock bag. Seal the bag with some air left inside
- Place the bag in your refrigerator for 5-10 weeks. You can 'burp' the bag by opening and closing it every few weeks to refresh the air inside it

This stratification process mimics Winter and breaks the dormancy of the seeds, prompting the germination process to begin.

Now just follow the rest of the instructions in your growing guide!
